

prestageous national projects. For example, IIT Delhi has contributed to the communications of India to the UNFCCC by formulating the climate change impact assessment on water resources of India. The group has contributed by formulating a GIS-Based hydrological information system of India (http://gisserver.civil.iitd.ac.in/natcom) that can play a very vital role in the integrated water resources management of the country.

About The International Water Management Institute (IWMI)

The International Water Management Institute (IWMI) is a nonprofit, scientific research organization focusing on the sustainable use of land and water resources in agriculture, to benefit poor people in developing countries. IWMI's mission is "to improve the management of land and water resources for food, livelihoods and the environment." IWMI has its headquarters in Colombo, Sri Lanka, and regional offices across Asia and Africa. The Institute works in partnership with developing countries, international and national research institutes, universities and other organizations to develop tools and technologies that contribute to poverty reduction as well as food and livelihood security. For more information, visit www.iwmi.org.
