**IWMI Advisory Services.**

## **If you are:**

- Keen on achieving more circular economies
- Seeking a reliable means to evaluate your work
- Eager to join the solar revolution in smallholder irrigation
- Concerned about water for sustainable development

## About us

We deliver customized water solutions and unbiased, evidence-based advice derived from decades of research. We work through a global network of experts from diverse disciplines to shape solutions to your specific needs and circumstances.

## Resource recovery and reuse

We help entrepreneurs, companies and governments devise viable business models for the recovery and reuse of resources from waste.

We have analyzed an ample portfolio of business models for safe management of waste and wastewater that capitalize on the reuse of by-products.

## Impact evaluation

How best to invest limited resources? We help find answers by using robust data and verifiable evidence to assess impacts and develop unbiased recommendations.

Our experts carry out quantitative and qualitative analysis along the entire life cycle of a project.

## Solar irrigation

Solar-powered irrigation promises to raise agricultural productivity and farmers' incomes, but steps must be taken to avoid adverse effects on crops, soils and groundwater. We help devise viable business models for sustainable solar irrigation, drawing on our multidisciplinary expertise and unbiased analysis.

## Water accounting

Based on decades of data collection and analysis, IWMI provides objective estimates of water flows, fluxes, stocks, consumption and services. We provide advice that enables equitable and transparent water governance, responding to the needs of diverse water users.
