#### **CGIAR Initiative on Climate Resilience**

The CGIAR Initiative on Climate Resilience, also known as ClimBeR, aims to transform the climate adaptation capacity of food, land, and water systems and ultimately increase the resilience of smallholder production systems to better adapt to climate extremes. Its goal is to tackle vulnerability to climate change at its roots and support countries and local and indigenous communities in six low-and middle-income countries to better adapt and build equitable and sustainable futures.

#### **SUMMARY**

To enhance disaster management strategies in Sri Lanka, crucial change from reactive to proactive approach is important. Anticipatory Action, a proactive approach, involves early risk identification, monitoring, and preparedness measures. Establishing an Anticipatory Action framework requires collaboration and awareness among relevant agencies. A comprehensive two-day residence training program, designed by World Vision Lanka (WVL) and the International Water Management Institute (IWMI), aimed to equip government agencies with skills to develop Anticipatory Action protocols. The program covered key modules, including the concept of Anticipatory Action, components involving knowledge products and tools, distinctions from traditional response mechanisms, viability assessment, early warning practices, and the development of Anticipatory Action protocols and triggers. Special emphasis was placed on financial integration, MEAL planning, simulations, and addressing operational challenges. A total of 27 Participants from Disaster Management Centre (DMC), Department of Meteorology (DOM) National Building Research Organization (NBRO), Irrigation Department (ID), and National Disaster Relief Services Centre (NDRSC) actively participate for the training. The program utilized a module-based approach for an interactive learning experience. The program concluded with discussions on the way forward, emphasizing Anticipatory Action's essential role in national disaster reduction, highlighting a collaborative commitment to enhancing disaster preparedness and management in Sri Lanka.

#### **INTRODUCTION**

Sri Lanka's susceptibility to a spectrum of natural hazards, the country faces an increasing risk of both flood and landslide disasters, particularly exacerbated during the monsoon seasons extending from May to September and October to January, depending on the specific regions. In elevating disaster management practices, a compelling imperative emerges to transition from conventional reactive measures to proactive approaches, effectively mitigating and minimizing the impact of natural disasters. This strategic shift is critical, enhancing the nation's resilience and responsiveness to the emerging challenges posed by natural disasters.

Anticipatory Action serves as a proactive approach aimed at mitigating the impact of future disasters or crises before their onset. This approach involves the identification of potential risks, monitoring, early warning, and implementing measures to reduce the vulnerability of communities. The key role of Anticipatory Action is to undertake preventive measures in advance, based on forecasted events or indicators, to reduce the severity of the impact and enhance the overall preparedness process.

Establishing an Anticipatory Action framework in Sri Lanka requires a combined effort to raise awareness among relevant agencies actively engaged in disaster management and mitigation activities. The main objectives of the training program are to stand in a constructive dialogue regarding the establishment of the Anticipatory Action framework in Sri Lanka and to communicate the building blocks of Anticipatory Action to individuals at every level within the administrative structure of stakeholder agencies.

To overcome the objective of a two-day training program was methodically planned to train the government agencies, including the Disaster Management Center, the Meteorological Department, the National Building Research Organization (NBRO), and other pertinent entities. The program was collaboratively designed by World Vision Lanka (WVL) and the International Water Management Institute (IWMI). The training modules directly aimed to equip participants with the necessary knowledge and skills to develop Anticipatory Action protocols for flood and drought. WVL provided full financial support to ensure the successful completion of the training program, emphasizing the collaborative commitment to enhancing disaster preparedness and management in Sri Lanka.

#### **WORKSHOP OBJECTIVES**

The main objectives of the training program are to initiate a constructive dialogue on the establishment of the Anticipatory Action framework in Sri Lanka. Additionally, the program undertakes to effectively convey the concept of Anticipatory Action to individuals of stakeholder agencies.

#### Specific objectives;

- To ensure a comprehensive understanding of the required support from stockholder agencies
- To train to develop the Anticipatory Action protocols for relevant Divisional Secretariates Divisions (DSD) or Gramaniladari Divisions (DSD).

Dates of workshop: 29th – 30th November 2023

Venue of workshop- Pegasus Hotel, Wattala

#### **TRAINING PROCESS**

The training program was carefully developed adopting a module-based approach, which encompasses a diverse array of informative methods to ensure a comprehensive and interactive learning experience. This includes engaging presentations designed to convey key concepts, thought-provoking group exercises to facilitate the practical application of theoretical knowledge, dynamic group discussions promoting collaborative learning and idea exchange, and dedicated feedback sessions to provide participants with constructive insights and enhance the overall effectiveness of the training curriculum (Table 1).

#### **LIST OF PARTICIPANTS**

A total of 27 participants actively engaged in the comprehensive two-day training program (Table 2), representing diverse entities including the Disaster Management Center (DMC), Department of Meteorology (DOM), National Building Research Organization (NBRO), as well as Irrigation Department (ID) and National Disaster Relief Services Centre (NDRSC). This strong attendance highlights the broad engagement and collaboration across a spectrum of organizations, contributing to the success and inclusivity of the training initiative of Anticipatory Action.

**Table 2:** List of participants for Anticipatory Action training program

| Name                           | Designation                                 |
|--------------------------------|---|
| Mr. Chathura Liyanaarachchige  | Director (Preparedness) - DMC               |
| Mr. Pradeep Kodippili          | Director (Training & Awareness) - DMC       |
| Brig. T.C. Harasgama           | Director (Operations) - DMC                 |
| Mr. Nalaka Priyashantha        | Director (Planning) – Minsitry of Defence   |
| Mr. Chathuranga Kumarasiri     | Scientist - NBRO                            |

#### TRAINING PROCEEDINGS

#### Welcom remarks by Jude Kuruvitaarachchi, (Manager HEA, World Vision Lanka)

World Vision Lanka has piloted this anticipatory action project in Sri Lanka during last 15 months targeting 20 estate divisions and landslide and flood hazards. Transformational Development, Advocacy and Humanitarian and Emergency Affairs are the main pillars of world vision. As a humanitarian agency which is worked and working almost all the districts during last 4 decades, believes capacity enhancement of the partners is a key for sustainability. This capacity development programme is structures based on the three building blocks which you will be learning during next sessions. I hope this will be an eye opener to streamline AA in our organizational and country level.

While welcoming you all to this programme again I also wish to express thanks and gratitude to the Director General of Disaster Management Centre, and other heads of the organizations that you all are representing for allowing you all to attend this all important programme.

#### Opening Remarks by Dr. Dhanan Senathirajah (National Director, World Vision Lanka)

During the oening remarks by Dr Dhanan Senathirajah highlighter that anticipatory action is a growing area of disaster management that relies on data analysis to predict where crises might strike and act ahead of time. Humanitarian Agencies across the world are playing a vanguard role in bringing this kind of early, protective interventions into the mainstream of humanitarian programming.

I believe that anticipatory action is a kind of protective humanitarian programming that more and more agencies and governments around the world are now using to shield people from climate- and human-induced disasters. And that's with good reason: evidence continually shows that anticipatory action supports vulnerable people at a stage when receiving aid bears the biggest results: before a crisis has taken place. This means humanitarian interventions can become investments in resilience and progress rather than recovery. Therefore, I trust stakeholders who present here too take necessary proactive steps to mainstream anticipatory action into the country's disaster management paradigm,

Anticipatory action acknowledges vulnerable people as leaders in development and agents of change in their own lives and communities. And by providing them the right kind of support at the right time. Since acting early to protect is often many times cheaper than responding and rebuilding, anticipatory action is not just the more dignified way of supporting communities, but I believe it's also often the smarter choice financially. And that's not a trivial point at a moment of unprecedented needs across the world, with aid budgets stretched to the extreme to meet them.

Early Warning, Early Action and Early Finance are the pillars of the anticipatory action and I'm sure that training programme will enhance the knowledge to implement successful anticipatory action initiatives at your respective areas. The survey conducted by CERF, reveals that more than 70% of the vulnerable people prefer to get support before any disaster and they believe with those support they can reduce the impacts to their lives and livelihood.

# Opening and Opening Remarks Chathura Liynaarachchige (Director Preparedness, Disaster Management Centre)

In his opening remarks, Chathura Liynaarachchige, the Director of Preparedness at the Disaster Management Centre, provided valuable insights into Anticipatory Action. He emphasized the significance of Anticipatory Action as a novel approach for the DMC, underscoring its practicality. Additionally, he highlighted the importance of training in this area, recognizing it as a crucial aspect for the effective implementation of Anticipatory Action strategies.

#### **DISCUSSION AND WAY FORWARD**

Upon the conclusion of the training program, a vibrant and constructive discussion expanded, involving all participants. This session was thoroughly designed to capture valuable feedback, touching upon various crucial aspects related to Anticipatory Action as follows:

- Usefulness and Applicability of Anticipatory Action
- Institutional Responsibility for the Implementation of Anticipatory Action Plans
- The Process to Develop the National Framework for Anticipatory Action
- Arrangements with the Government for Early Finance

#### **CLOSING REMARKS**

In his closing remarks, Dr. Niranga Alahacoon emphasized the essential role of advancing Anticipatory Action (AA) as a strategic approach to national disaster reduction. Emphasizing the timeliness of AA, he stressed the importance of integrating previous financial approaches and agreements into its framework. Mr. Chathura Liynaarachchige highlighted the necessity of aligning these strategies with the mandates of disaster management institutes during his closing remarks. Furthermore, emphasize the proactive nature of AA and its potential to elevate the overall disaster preparedness and response framework. Additionally, Mr. Chathura Liynaarachchige emphasized the need for more training and implementation approaches in the future to drive the AA initiative forward.
